PATIENT ID 23-052-00019			DATE REPORTED 03/08/2023		

Order Comments:

Accurate results of the Micronutrient Testing (MT) are dependent upon the isolation of a pure suspension of lymphocytes. In this specimen, we were unable to isolate the lymphocytes from the total cell population. The red blood cells migrated with the lymphocytes, contaminating the buffy coat and rendering the specimen unsuitable for testing. This can be the result of abnormal red blood cell morphology, difficulty during collection or exposure to extreme heat or cold during transportation.

If recollection is clinically indicated, please submit TWO FULL YELLOW-TOP ACD tubes.

We regret any inconvenience this may cause you or your patient.
